

WHY SHOULD I GET AN ENERGY AUDIT?

LOWER ENERGY BILLS

Homeowners can save 5-30% on annual energy bills by implementing Audit recommendations - sealing air leaks and adding insulation alone saves an average of \$200-400 annually!

INCREASE HOME COMFORT

Energy Audits help identify issues that cause drafts, hot/cold zones, poor air circulation, and what you can do about it. The ACEEE suggests that homes that are properly sealed and with balanced HVAC systems experience fewer yearly temperature fluctuations and increased comfort.

ENHANCED INDOOR AIR QUALITY

Audits can reveal problems like leaky ducts that draw in pollutants, allergens, dust, or moisture. These can lead to mold, mildew, and a variety of health problems; this is particularly beneficial for households with asthma or allergies.

INCREASED HOME VALUE

There are a wide variety of financial benefits to receiving an energy audit and implementing energy efficiency upgrades; such homes sell for 2-8% more on average, an energy efficient home typically recoups 70-80% of upgrade costs in resale value, and homeowners can expect a lifetime return of \$4-7 for every \$1 invested.
